

CLAIMS

We Claim:

1. A customer premise system for connection to both an analog and a packet network for
5 conducting analog and voice-over-packet (VoP) telephony calls, said system comprising:
an analog call processor for providing analog call control processing;
a VoP call processor for providing VoP call control processing;
one or more user audio devices for accessing the analog and packet networks; and
a switching and bridging system for interconnecting the user audio devices, analog
10 network, and packet network.
